 EuroCraft Industries Inc.

Whichever window or door you need, with *greenline* you make the right decision : not just by choosing this advanced material, but one that adds value to any building and, at the same time, increases environmental protection. With *greenline*, you will use a valuable product in your home : the PVC-U window for the future with 100% lead-free stabilized material.

The window material of the future

For more than a century, EuroCraft has invested its potential in research and innovation, improving the quality of life to the benefit of all of us. Controlled technology has enabled the brand to offer products of an exceptional quality, produced in Germany, in which it is the European market leader. *greenline* is a concept that has been perfected to preserve our natural resources.

EuroCraft of the profine group is the only large profile manufacturer to use calcium-zinc as stabiliser in its PVC-U profiles and thereby avoids lead through-out the entire manufacturing process.

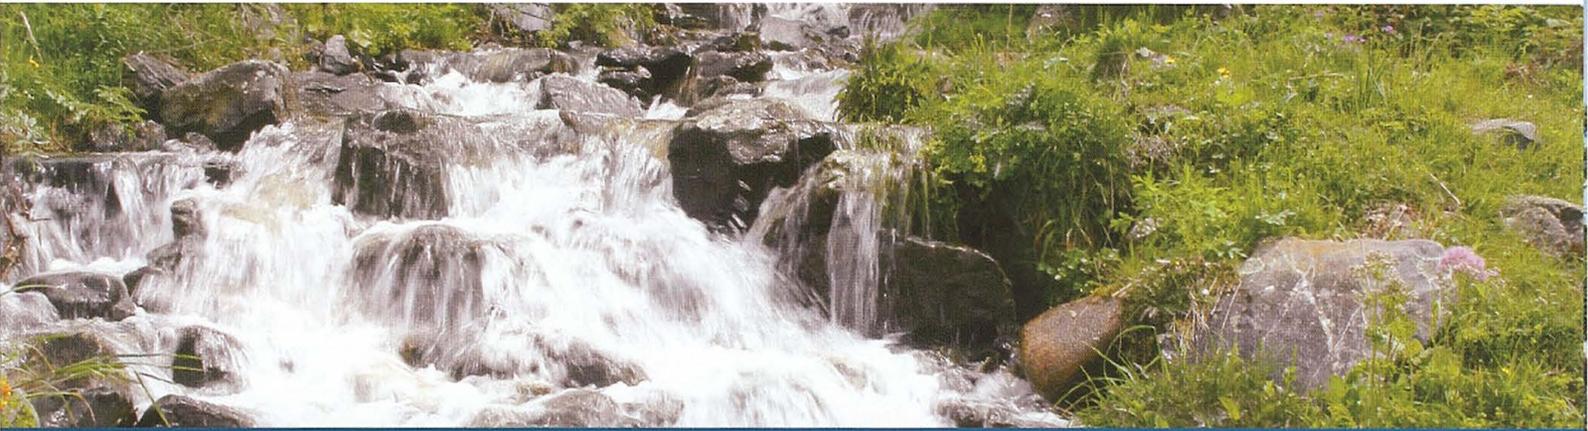

Since January 2001, EuroCraft has used calcium-zinc stabilizers instead of lead. From 2003 profine began producing the innovative, unleaded PVC-U formula *greenline* at its own highly advanced manufacturing plant in Pirmasens, excluding heavy metals from the production process completely.

EuroCraft welcomes the opportunity of caring for the environment and for the well-being of future generations. profine already complies with the requirements of the "Vinyl 201 O" initiative, as well as the EU Environment Commission's aim of avoiding lead as a stabiliser in the industrial production.

This means that we take our role as the market leader very seriously and assume the responsibility for people and the environment for a long time afterwards.

By choosing this advanced generation of PVC-U windows and doors, you have chosen to support a more environmentally friendly and sustainable material which meets tomorrow' environmental standards already today.

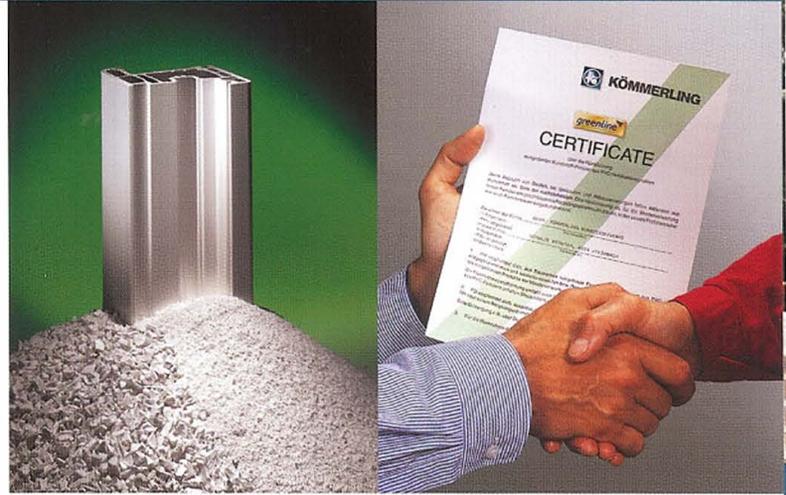

**Added value at no extra cost - greenline
boosts the benefits of PVC-U windows**

Due to its unique properties, PVC-U is widely recognised as one of the best and most fit-for-purpose materials for windows and doors. *greenline*® adds benefits to every stage of its life cycle, making your decision to use PVC-U windows and doors very easy.

Stabilised with *greenline*®, PVC-U windows become even more environmentally friendly. The windows are entirely recyclable, and the PVC-U can be completely integrated into the production of new, high-quality window profiles.

All PVC-U windows made from *greenline*® lead-free stabilised profiles contribute to protecting our climate, due to the well-recognised thermal insulation properties of PVC-U.

greenline® also offers sustainability, a feature that benefits everyone, customer and manufacturer alike. In addition, EuroCraft Industries PVC-U profiles provide all the acknowledged advantages of the material: Low purchase costs, extreme durability, outstanding weathering resistance and low maintenance. Choose *greenline*® and you are opting for a product that not only provides value now but will remain in excellent condition for generations.
